Bio 3SS Math review

Notation (e is cool)

- In this course \log_e means the *natural* logarithm (written \ln in the textbooks)
 - If I mean $\log_{10},$ I will say so
- exp() is a synonym for "e to the power of"

Logarithms

- Multiplying on the original scale is equivalent to adding on the log scale
 - $-\log(ab) = \log(a) + \log(b)$
- Division is the opposite of multiplication and subtraction is the opposite of addition:

$$-\log(a/b) \equiv \log\left(\frac{a}{b}\right) = \log(a) - \log(b)$$

- \bullet Exponentiation is to multiplication like multiplication is to addition:
 - $-\log(\lambda^k) = k\log(\lambda)$

Complementarity

- \bullet \log_e and \exp are complementary functions
 - $-\exp(\log_e(x)) \equiv e^{\log_e(x)} = x$
 - $-\log_e(\exp(x)) \equiv \log_e(e^x) = x$

Exponentiation

- The rules for exp are exactly complementary to those for log
 - $-\exp(a+b) = \exp(a) \cdot \exp(b)$
 - $-\exp(a-b) = \exp(a)/\exp(b)$
 - $-\exp(k\log_e(\lambda)) = \lambda^k$
- Remember: you can't take the log or exponent of something with units

Problems

- You should be able to use these rules to solve simple problems, algebraically, or on your calculator
 - If $\lambda^{20} = 0.1$, what is λ ?
- Also, word problems
 - If a population declines by 90% in 20 generations, by what proportion does it decline in one generation?

Algebra

• If $\lambda^{20} = 0.1$, what is λ ?

_

_

_

• If $\exp(rt) = 5$, and r = 0.1/yr, what is t?

_

_

Units are our friends

- Keep track of units at all times
- Use units to confirm that your answers make sense
 - Or to find quick ways of getting the answer
- Get used to manipulating and cancelling units
- 36 mpg = ?? L/100km
